<https://apkgk.com/com.xhorse.streamlinestore/download>

## **FAQ:**

Q: How can we pair it with KeyTool? My phone didn't find it via Bluetooth.

A: Doesn't connect directly like that with Bluetooth, you have to open the app and in the settings select your device to pair

I presume you also checked in the key tool settings that the bluetooth function is turned on, i think default it is off.

Also need open and gps location on android.

Q: android phone,gps is on,everything is on... includind my nerves blinking like a christmas tree but pair can not be made,phone see keytool but when i try to connect connects for a second and then disconnects....

A: Do not try to pair the phone in the phones settings... run the app first then the app has a pair option - use that.

## How to install and register Xhorse Key tool Android APP?

Step 1: Download app from Google store

If your APP doesn't switch to ENG, change your phone language to ENG first.

Step2: Go to EMAIL REGISTRATION

Step 3: write your email and request activation code via email

Step 4: Paste code you received via mail

Step 5 - create password

Step 6 - Login via mail and password

Done

Pleas enjoy
